

Wildlife Preservation Canada

We are saving species from extinction across Canada by providing direct, hands-on care.

Species We Work With

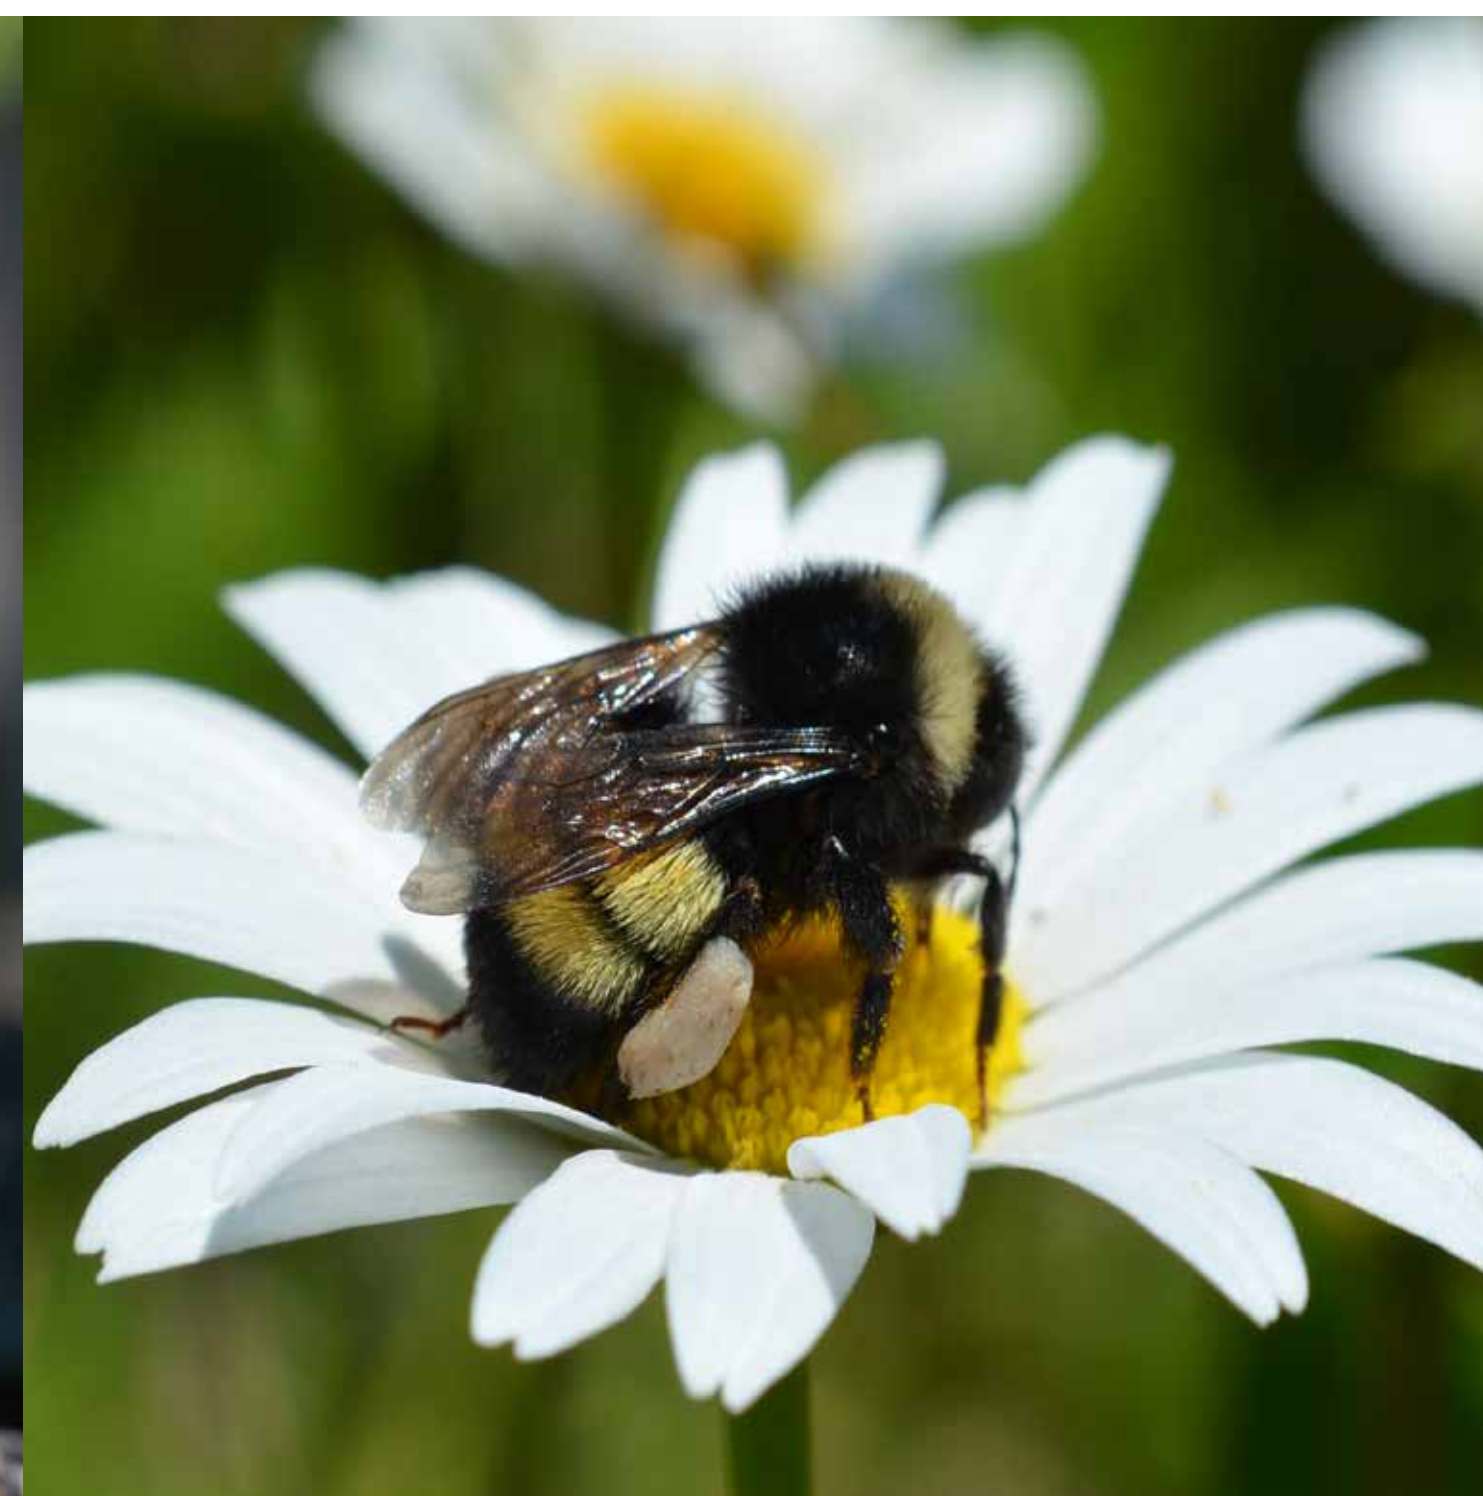

Here at WPC, we work with a variety of species. From reptiles and amphibians, to birds and butterflies, we help a range of endangered animals in Canada.

Eastern loggerhead shrike

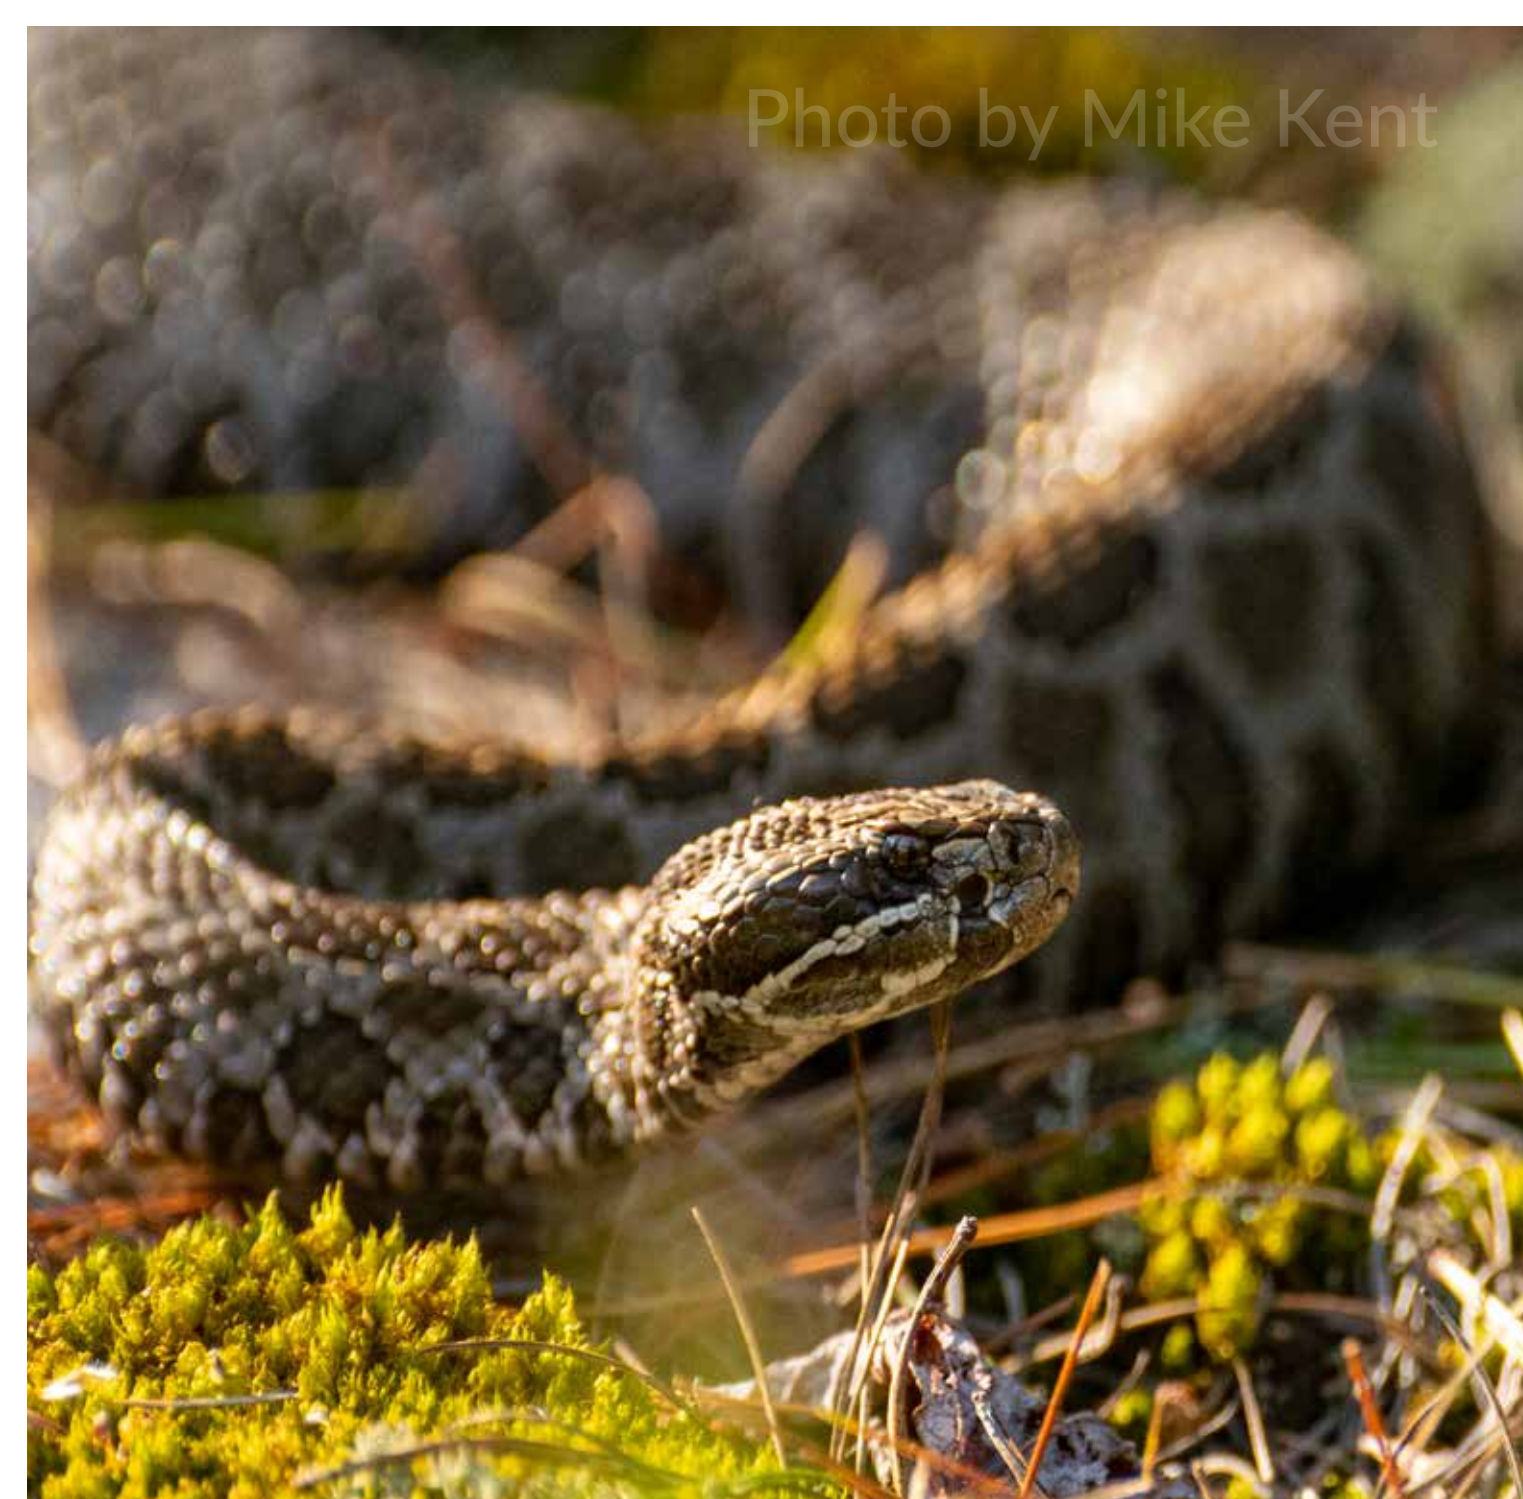

Blue racer

Yellow-banded bumble bee

Oregon spotted frog

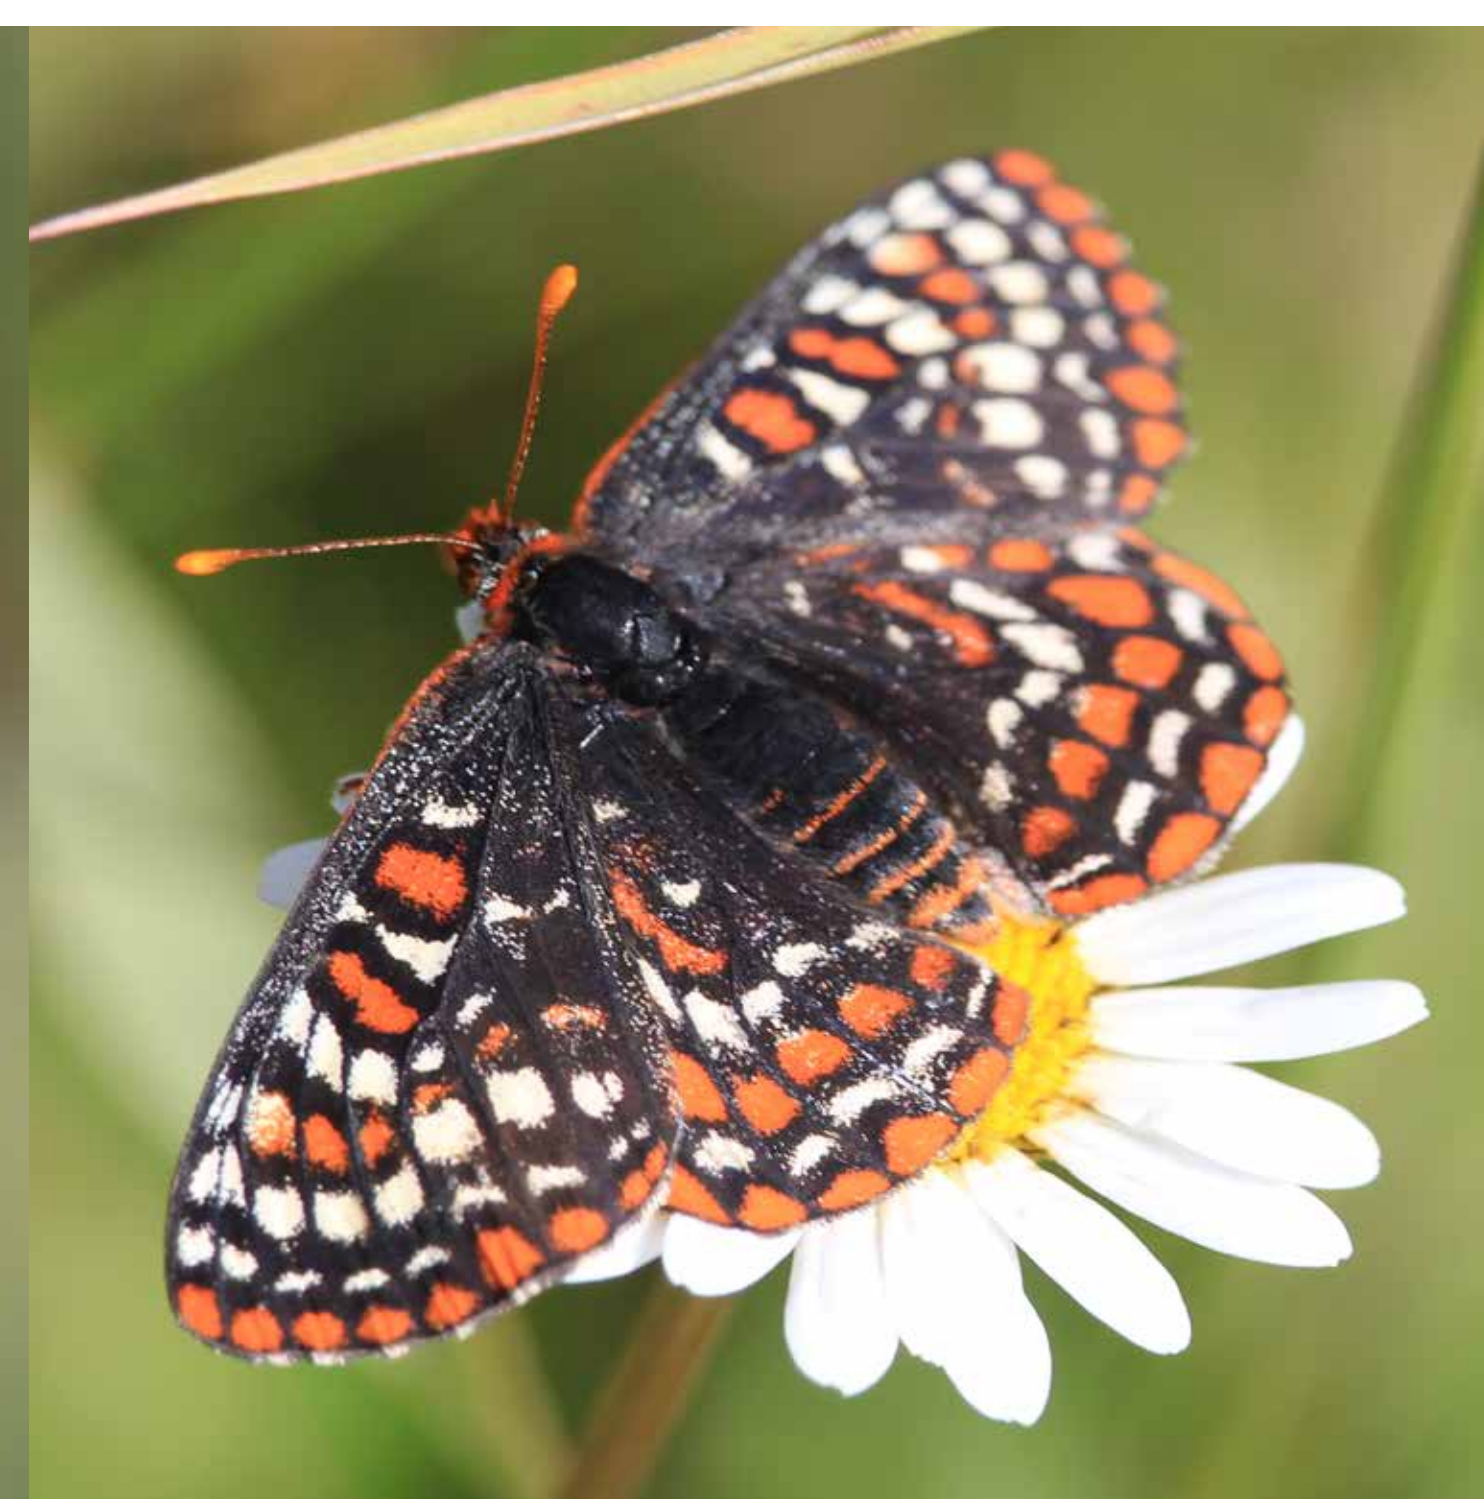

Massasauga rattlesnake

Butler's gartersnake

Western painted turtle

Taylor's checkerspot butterfly

Fun Facts

- The western painted turtle's belly (aka plastron) pattern is like a fingerprint - unique to each turtle!
- Bumble bees use buzz pollination, vibrating the flowers they land on to release pollen.
- The eastern loggerhead shrike has tomial teeth on its hooked bill - two sharp edges for hunting.
- The massasauga rattlesnake makes its distinct rattle sound by vibrating hollow scales on the tip of its tail. These scales are made of keratin, the same as your fingernails!

What can you do?

An easy way to start helping endangered species in Canada is with our Bumble Bee Community Science Program. Learn how to survey bumble bees, upload pictures for biologists to use, and join some of our events!
