Bee Morphology

Females & Males

Male bumble bees emerge later in the season and have some of the following physical characteristics.

FEMALE

MALE

Males have:

1. Extra abdominal segment
2. Extra antenna segment
3. Thinner legs with no pollen baskets
4. Often longer/ shaggier hair

Males are difficult to identify to species by colour compared to females.

This is for quick reference for identifying the most common and declining bumble bee species in Maritime Canada. Only common colour pattern(s) for queens of each species is provided. If you encounter a different colour pattern or caste, refer to a more comprehensive resource.
